- Supports digital TV and DSS services (optional provider subscription required)

The Leviton Structured Media™ Center shown with networking and multi-room video and multi-room audio options.

For more information, contact your sales representative.

## Your connection to the future

Your Leviton Structured Media™ infrastructure will support both today's and tomorrow's home entertainment and information technologies. It also can adapt to your changing needs – for example, if you decide to set up a home office or even a small business in your home.

### Your Leviton Structured Media infrastructure is designed to handle:

- Multi-line telephone, fax, modem and other residential communications needs
- High-speed Internet\* sharing (DSL, cable modem and satellite) and PC networking (with upgrade)
- Digital cable TV (cable or satellite)
- Connection to an optional home security system
- Video security monitoring (with video monitoring upgrade)
- Multi-room video and multi-room audio (with upgrade)

All cabling and communications jacks and connectors (telephone, computer and video) are connected using only industry-compliant cabling (Category 5e cable and RG-6 Quad-Shield coaxial cable) and installed to deliver the highest speeds and performance to meet all your information and entertainment needs.

### More options to meet all your information needs

You can choose from several upgrade options including high-speed networking, sharing of a high-speed Internet\* connection, video monitoring, multi-room video and music.

Every time you plug in a phone or PC into a wall jack in your new home, you're plugging into a Leviton Structured Media™

cabling infrastructure designed to move data at speeds of up to 100 Megabytes per second. That means that you're ready to connect to a range of optional high-speed Internet\* services.

Digital TV can bring hundreds of channels into your home from a satellite or cable TV provider – and ultimately deliver the movie-theater-quality experience of HDTV. Your Leviton Structured Media™ infrastructure is ready for it when you are.

### Two upgrade packages for Internet sharing and home networking

Eliminate those household arguments about who can be on the Internet. The Internet Sharing Upgrade package allows multiple computers to simultaneously access the world-wide web using one high-speed broadband account.\* You'll enjoy multi-room

\* Requires high-speed Internet account (cable, DSL, ISDN or T1 line) provided by homeowner.

access to super fast downloads and web surfing. These products also protect you from hackers with an ultra-safe, built-in hardware-based firewall.

The Networked Home Upgrade allows your PC's to share files, printers and scanners. You'll like the convenience of multi-location access that allows you to plug in to any of several points throughout your home.

These upgrades are ideal for telecommuters, gamers, graphic designers or any home with more than one computer and people with demanding schedules who cannot afford to wait.

### Home video security monitoring upgrade

Keep an extra eye on the most important assets in your home. Leviton's Home Video Security Monitoring Upgrade lets you watch up to four high-quality security video cameras on dedicated

security channels from any TV in your home. You'll enjoy the extra peace of mind that comes with knowing exactly what the smallest and most vulnerable members of your family are doing and with whom.

### Multi-room video upgrade

Get the most out of your family's entertainment center by extending it throughout your home. The Multi-Room Video Upgrade provides your home with its own dedicated

entertainment cable TV channel. Just select the channel on any cable-ready TV in your home. Watch DVD's, videotapes or satellite TV while leaving the entertainment center in your family room free for others to use. Special installed IR extension technology even lets you use your remote controls from

other rooms in your home. You can play a DVD or VHS tape in your family room and watch it on the TV in your bedroom with full remote control capability.

### Enjoy whole-house music with the multi-room audio upgrade

Listen to your stereo in several rooms with in-wall and ceiling speakers that blend in with a room's décor. These speakers are optimized specifically for these types of installations in order to give a full, rich sound. We also offer speakers designed for

optimal performance in outdoor locations. Plus you get complete control of the music level in each location with in-wall volume controls. You'll enjoy the flexibility of

adjusting the volume level in each room so it's just right, whether you're entertaining guests or just relaxing.

### Install now for the future

The key feature of your Structured Media™ infrastructure is being in the right place at the right time – planning it to be part of your new home and having it installed when it's being built. By installing all the cabling at this stage, the system costs less than if purchased after construction is completed – up to four times less. And all the cabling is hidden out-of-sight, inside your walls where it belongs.

Because it's engineered for your home, it helps maintain your home's resale value. Best of all, as part of your new home it also can be part of your mortgage – making it very affordable to own.
